Consider this, your mind is a muscle, it is a professional athlete in the creative and business world. Like all pros, you need to take care of yourself, recover, and yes, be fueled properly.

Yep, you heard me put that candy bar down right now.

The next time you are tempted to neglect your nutrition consider these three ways it will impact your

~~It's productivity will take a hit.~~

A typical breakfast consists of cereal, toast, muffins and fruit. But is all that early morning carbohydrate loading going to help you all day?

[Research](#) shows that high carbohydrate breakfasts similar to those of a standard America diet cause substantial impact to brain tryptophan levels and serotonin synthesis. What this means is, when you eat a lot of carbohydrates in one sitting your productivity takes a major hit. Your [mood and cognition are greatly impacted](#) and lead to fluctuations and reduction in your ability to focus and complete tasks.

That sounds like a recipe for disaster. But it can be fixed by having breakfast with varied nutrients if you spend a little time at the beginning of the week preparing. The more you can do upfront, the less you have to worry as the week rolls on.

Hard boil some eggs and grab a few beneficial fruits from the store. Eggs contain choline a nutrient that improves memory and reaction time while providing protein to your diet. Have these on hand along with a banana. Did you know your brain functions best with [25 mg of glucose circulating](#), this is about the same amount of what is in a banana.

When you have easy to grab food on hand you are better equipped to make the right choices and stay productive.

2. Self-control goes out of the window.

Don't make a big work or life decision when you are hungry!

Consuming foods with a high glycemic index value cause blood sugar levels to spike. These spikes send

~~your energy through the roof for a short period of time, only to plummet into a deep decline. Not only~~

Fill your lunch with [rolled oats](#), [sweet potatoes](#) and [dark leafy greens](#) to get the most nutrients with the lowest glycemic index. This will lead you into the remainder of the day able to make smart decisions with long term gratification and goals in mind.

3. Exhaustion kicks into your daily life.

Dietary patterns impact not only your ability to function productively during the day but also make a major influence on nighttime sleep and recovery. The more you can align your diet with your natural clock and circadian rhythms the better rest and recovery you will receive.

When a late night at the office hits, resist the urge to consume that final cup of coffee, the [caffeine half-life](#) will lead long into the hours (five to six) after you drink it putting a damper on your sleep quality. And don't eat that big meal when you get home before hopping into bed. This is like telling your body it's time to fuel up and keep going, not wind down to rest.

Research recommends eating the largest meal of the day in the morning to fuel you for the day and to consume [milk products](#), [fish](#) and [vegetables](#) in the evening to promote higher sleep quality.

It might be tempting to not worry about what you eat when working long hours, but if you can spend a little time each week in preparation and planning your diet will take a major boost, and so will your work performance.

Remember, you are what you eat, and you work how you eat. So do it right!

PETRONAS is contributing to regional CCS development through large-scale carbon capture and storage efforts.
PETRONAS

Driven by a passion for progress, PETRONAS is leading Asia's energy transition, innovating, collaborating and investing in a sustainable future for all. As a progressive energy and solutions partner, the company is committed to enriching lives for a sustainable future.

Never before have energy companies faced such tough challenges: from rising consumption due to the growing population, to the urgent call for climate action, and disruptive forces brought on by digital innovation and AI.

For Malaysia's PETRONAS, this is not just a time of transition, but also an opportunity to lead. With more than five decades of experience and operations in over 100 countries, the energy company is drawing on its experience to offer innovative solutions with minimal impact on the environment.

"Energy security and climate actions are not competing priorities but complementary agendas," said Tan Sri Tengku Muhammad Taufik, President and Group CEO of PETRONAS, at the recent [Energy Asia 2025](#) conference in Kuala Lumpur.

Transition Strategy To Achieve Net Zero

For a national oil company, achieving net zero by 2050 is no easy task. It needs to rethink the entire business to reduce its carbon footprint: from how energy is produced, to how it is delivered and consumed, while benefiting communities along the way.

PETRONAS' transition strategy is driven by a three-pronged approach: lowering emissions from its oil and gas operations, expanding into renewables and low-carbon alternatives, and supporting these shifts with digitalization, carbon management technologies and targeted measures to curb emissions.

integrated energy solutions.

Clean Energy Ventures With Gentari

Delivering cleaner energy solutions is another major focus for PETRONAS. In 2022, the company established its clean energy arm, Gentari, offering solutions through three growth engines: renewable energy, hydrogen and green mobility.

Gentari's venture into renewable energy includes investments in solar, wind and battery energy storage projects, to serve both Commercial and Industrial (C&I) and utility-scale customers, particularly in Malaysia, India, Australia and Taiwan. At the same time, it is collaborating with companies across Asia and Europe, to advance hydrogen production and adoption especially in hard-to-abate sectors. In its green mobility business, Gentari is expanding its network of charging stations for electric vehicles, both in Malaysia and abroad, including India and Thailand.

Gentari continues to collaborate with diverse stakeholders and strategic partners across industries and geographies to drive wider adoption of cleaner energy solutions, accelerating the transition to a low-carbon future.

SATU and PFLNG DUA platforms enable gas processing directly at sea, eliminating the need for extensive lands and pipelines and offering a more flexible and sustainable approach to LNG production. *PETRONAS is the first energy company in the world to own and operate two FLNG facilities, with a third shore-based floating LNG facility underway.*

Beyond LNG, PETRONAS is ramping up its focus on low-carbon energy, including hydrogen and biofuels. These efforts are aligned with its broader goal to diversify revenue streams while helping industries transition to cleaner energy.

PETRONAS' evolution into an energy superstore is evident in its ability to deliver a full spectrum of progressive energy solutions, from LNG and renewables to future fuels like hydrogen and specialty chemicals—all underpinned by decades of operational excellence.

Forging Global Partnerships

Recognizing that the energy transition can only be achieved with collective action, PETRONAS is investing in regional and global collaborations.

Its leadership in the ASEAN Power Grid, through the MY Energy Consortium with Tenaga Nasional Berhad, is one example. In May 2025, the consortium signed a deal to explore renewable electricity exports from Vietnam to Malaysia and Singapore, marking a step forward in cross-border clean energy trading.

Globally, PETRONAS is forging partnerships with key players such as Japan's JERA—one of the world's largest LNG buyers—to pursue a balanced approach to energy security and decarbonization.

Discussions with other Japanese companies such as ENEOS XPlora, Mitsubishi, JAPEX and more aim to explore the CCS value chain.

Investing In People

For PETRONAS, providing world-class educational and training services ensures a more sustainable pipeline of highly knowledgeable and skilled talent that supports the organization's growth, as well as Malaysia's energy industry. This is done through various educational institutions such as Universiti Teknologi PETRONAS, Institut Teknologi Petroleum PETRONAS, Akademi Laut Malaysia and PETRONAS Leadership Centre.

But it doesn't stop there. PETRONAS is also taking steps to ensure the upskilling is inclusive and community driven. From social impact initiatives to collaborative upskilling programs with local educational institutes, the company is working to reduce disruption while unlocking long-term social and economic opportunities.

Every step the company takes is guided by its purpose: to be a progressive energy and solutions partner enriching lives for a sustainable future.

Tan Sri Tengku Muhammad Taufik, President and Group CEO of PETRONAS
PETRONAS

Charging Ahead With Energy Asia

Today, PETRONAS' influence spans beyond the energy sector—into chemicals, agriculture, digital infrastructure, and motorsports. Its growing presence in venture capital and adjacent industries reflects a wider belief that innovation will be the key to building a sustainable future.

Through strategic investments and platforms such as Energy Asia, PETRONAS is shaping the narrative on energy security, equity, and climate action, proving that national oil companies can evolve into agile, forward-thinking partners in the global energy transition.

Energy Asia, initiated by PETRONAS in 2023, has evolved from a conference into a thought-leadership and business advocacy forum, with the aim of accelerating Asia's role in the global energy transition by focusing on solutions tailored to the needs of developing and emerging economies.

The second edition in 2025, which concluded in June, welcomed more than 14,000 visitors, including 180 speakers and 4,000 conference attendees from 60 countries. During the event, Malaysia's Prime Minister Anwar Ibrahim announced PETRONAS' plans to develop three CCS facilities in the country's offshore waters, working with 10 international partners from Japan and South Korea, as well as global energy firms such as TotalEnergies and Shell.

Through Energy Asia, PETRONAS is not only fostering solidarity and commitment to climate action but also helping define Asia's role in the global transition agenda.
